

ARAMEDES  
ZÜRICH

We're bringing together  
mechanical watchmaking,  
timeless design and  
pioneering technology.

Aramedes Zürich

# Preserve and Innovate

The most prestigious mechanical watches come from Switzerland.

The smartest ones don't.

And until now, no one has dared to combine the two into something that is both classic and clever.

# Mechanical Movement

Mechanical watch movements have been manufactured in Switzerland since the middle of the 16<sup>th</sup> century. This long tradition and the constant technical development have led to the fact that Swiss Made movements are today considered the best and most accurate movements in the world.

Such a movement of the highest quality also ticks in every Aramedes watch. A total of four different calibers are built into our watches. Those of the Mecca Collection have been specially modified for Aramedes in order to optimally implement the interaction between the mechanical movement and the Aramedes AraTec 1 Module.

# Timeless Design

Aramedes watches are available with stainless steel, bronze, or platinum cases. The domed sapphire crystal sits atop a dial and hands that have been delicately curved to match.

The 42 mm case features a mix of brushed and polished steel, a curved caseback, and mushroom pushers. It all adds up to simple beauty and refined elegance. All watches are delivered with our signature textile strap. Leather, suede, or stainless-steel bracelets are also available.

# Pioneering Technology

With the Aramedes Mecca Collection, we achieve a previously unknown functionality in the world of mechanical watches. The display of the Muslim functions would not be possible without the technology we conceived, developed, and built in Zürich.

The patented AraTec 1 Module houses a magnetic compass, a BLE RISC processor, a three-axis accelerometer, a linear resonant actuator, a vibration module and up to three step motors. The perfect interaction with the mechanical movement results in the unique functionality of the Aramedes Mastertimer watches.

# The Mecca Collection

We created the Mecca Collection for the Muslim world. These innovative timepieces feature up to three functions that support Muslims in the daily practice of their faith.

The correct display of these functions depends on the individual location and the position of the sun. This information cannot be displayed with a purely mechanical movement.

Therefore, in addition to a classic mechanical movement, the watches in the Mecca Collection also contain an electronic component: The AraTec 1 Module developed and patented by Aramedes.

# Three Muslim Functions

**Qibla indicator**  
Mecca compass

Press the button at 2 o'clock and the watch will calculate and show you the direction to Mecca based on your current location.

**Salat indicator**  
Prayer time

Set your prayer time convention and the Salat display will always show your next prayer time. The watch has an alarm function. When it is time, gentle vibrations will alert you.

**Sawm indicator**  
Fasting support

Depending on your location, the watch calculates sunrise and sunset and displays this information precisely on the 24 h display at 6 o'clock.

## The Mecca Collection

Mastertimer  
Qibla

Mastertimer  
Salat

Mastertimer  
Sawm

Mastertimer  
Salat Tourbillon Automatic

### Cases

- Stainless steel
- 42 mm diameter
- Domed sapphire crystal
- Anti-reflective coating on both sides
- 30 meters water resistance

### Movements

- SW300
- Hours, minutes, seconds
- Automatic, self-winding
- 28'800 vibrations per hour (4 Hz)
- 42 hours power reserve
- 25 jewels

- VMF 3024
- Hours, minutes, 60-second flying tourbillon
- Automatic, self-winding, 22K gold rotor
- Titanium cage, twin barrels
- 28'800 vibrations per hour (4 Hz)
- 50 hours power reserve
- 33 jewels

### Functions

- Qibla indicator (Mecca compass)
- Salat indicator (prayer time)
- Sawm indicator (fasting support)

### Technology

- AraTec 1 Module
- 2.4 GHz BLE RISC Processor
- Magnetic compass
- Three-axis accelerometer
- Vibration module (LRA)
- Up to three step motors
- Bluetooth Low Energy

# The Zürich Collection

With the Zürich Collection, we are committing ourselves to our homeland. And we do so in several respects. Aramedes was founded in Zürich, and this is also where we have our headquarters. All our watches were designed in Zürich and are built with traditional mechanical movements. Just as it has been done, here in Switzerland, for hundreds of years. Zürich we love. Zürich we are. Zürich we do.

# Three Classic Functions

Classictimer  
Small Second

A watch of simple beauty and elegance. It shows the hours and the minutes of the time with the two large hands, and the seconds on a small subdial at 6 o'clock.

Classictimer  
Chronograph

The sportiest watch of the collection. Its mechanical stopwatch measures the seconds with the large second hand and displays the elapsed minutes on the small subdial at 3 o'clock.

Classictimer  
Tourbillon Automatic

The collection's flagship. Although already patented in 1801, a tourbillon watch is still considered the ultimate in the world of mechanical watches. In fact, this construction is so complex and intricate that only specialised watchmakers can even build such movements.

# Aramedes Watch Box

While others talk about sustainability, we put it into practice. The Aramedes watch box is lovingly designed and crafted out of sustainable materials in Switzerland. The box itself is made of recycled paper, the cushion on which the watch sits is made of recycled premium leather and the polishing cloth is made of recycled PET bottles.
